1. Overview

MIAX Sapphire™ FIX Orders Interface (FOI) is a messaging interface that allows MIAX Sapphire members and sponsored firms to send and manage their Options orders. FOI also facilitates real-time electronic communication of transaction information corresponding to such Option orders.

FOI is a flexible interface that uses FIX protocol version 4.2 with minor customization of certain tags. FOI uses FIX protocol for both application messages and session level messages. This document describes the messages that will be supported by FOI. For detailed information regarding FIX protocol and session protocol, please refer to the FIX documentation provided by FIX Protocol Limited (FPL) on their website <http://www.fixtrading.org/standards>.

This specification is intended to only be used by MIAX Sapphire member firms and the firms that are sponsored for MIAX Sapphire access by MIAX Sapphire member firms. MIAX Sapphire will be referred to as Sapphire in the rest of the document.

FOI Features:

FOI has been designed for flexibility, reliability, low latency and high throughput messaging. Some of the key features of the interface are:

- Use of FIX protocol that has been adopted by most of the participants in the Options industry. FIX tag/value messaging is a flexible messaging protocol that eliminates platform dependencies and allows to largely decouple exchange and firm deployments.
- FIX session layer is implemented over TCP/IP and facilitates sequenced transmission and recovery of messages across TCP/IP sessions thereby achieving reliable communication.
- FOI allows multiple connections per firm. On each FOI connection, Firms are allowed to send orders for any option symbol and any of their MPIDs. These features enable firms to achieve load balancing and higher resiliency. ClOrdID must be unique per MPID across all sessions per firm.
- FOI hides the intricacies of the Exchange architecture that includes many systems processing specific symbol ranges. FOI design, coupled with the Exchange architecture, facilitates low latency and high throughput messaging.
- FOI allows mass cancels of orders and Auto Cancel on Disconnect on each session thereby allowing firms to reduce their risk in bad market conditions or in case of system problems at their end.

1.1 Exchange Related Information

1.1.1 Hours of Operation for MIAX Sapphire Options Exchange

Note: Times specified below are as per timings of United States Eastern Time zone.

Order Acceptance: Firms are allowed to connect and send orders to FOI. 7:30 a.m.

Opening Process: Start of trading session. 9:30 a.m.

Trading Session finished for Equity Options: 4:00 p.m. (ends at 1:00 p.m. on early closing days) Sapphire stops accepting orders in these classes. Cancels are still allowed. Sapphire may still send queued executions.

Trading Session finished for ETF and Index Options: 4:15 p.m. (ends at 1:15 p.m. on early closing days) Sapphire stops accepting orders in these classes. Cancels are still allowed. Sapphire may still send queued executions.

End of Order Cancel Acceptance: Sapphire will stop accepting cancels for their orders. 4:25 p.m. (1:25 p.m. on early closing days)

Firms are expected to stay connected at least until End of Order Cancel Acceptance because system can send executions and cancels due to production closing logic. Disconnecting before that can result in not receiving key information about order status changes.

Dissemination of *Done for Day* Messages: Time range within which Firms can expect to receive a status message for open orders of the type that they are configured to receive status for. Start time will be anytime from 4:25 p.m. to 5:00 p.m. (1:25 p.m. to 2:00 p.m. on early closing days)

1.1.2 Additional Information

Information such as (but not limited to) membership, rules, fees and support can be obtained by sending an email to Trading Operations or by visiting the [MIAX website](#).

1.2 Certification for Trading via FOI

Sapphire will provide a test area for member firm's testing and certification needs. Please contact Trading Operations to obtain more information about this environment.

In order to connect to Sapphire production, member firms must certify their application with Sapphire. This certification testing is a manual process. In order to schedule a certification test, please email Trading Operations.

1.3 FAQs

Membership: Contact member services for details about membership. As a part of the membership, each member firm can get one or more unique MPIDs and one of those IDs will have to be sent in every message.

Routing strategies: Firms are allowed to designate each order as non-routable (DNR: do not route). Absence of the DNR attribute implies that the order is routable (route at opening each day or upon arrival and do not route when resting on book). Please refer to Sapphire rules as to the order types are routable.

Mass Cancels: Firms can request mass-cancels of their orders on each session (connection). FOI allows firms to cancel by

- All Orders received over a session (connection)
- For an MPID: ALL DAY orders
- For an MPID for a given Security Symbol (Class): ALL DAY orders
- Simple and/or Complex Orders in each of the options mentioned above

Auto Cancel on Disconnect (ACOD): This feature allows firms to limit their exposure during outages by electronically instructing Sapphire to cancel designated open orders upon connection loss. Internally, the ACOD directive is marked on a newly received order when either of the following two conditions exist:

1. Explicitly requested on a new order using Execlnst=0
2. Implicitly requested for all subsequently received new orders on a session established using RawDataLength=1 and RawData=1 in the Logon message.

Once an order is received and booked with the designated ACOD directive, the directive cannot be changed.

When FOI detects a disconnect for any reason (whether due to graceful logout, a connection loss or loss of 2 heartbeats), it will trigger the auto cancel on disconnect process, whereby FOI will try to cancel all eligible orders (eligibility defined above). Upon completion of ACOD, the FOI will not accept connections from the Firm for a configured period of time (e.g.: 5 seconds – refer to Sapphire Technical alerts for the latest setting).

The ACOD feature is designed to react to external connection loss scenarios only. Therefore, it does not cancel orders in the event of a Sapphire system failure. The ACOD feature is provided on a best effort basis. Executions can occur while FOI is processing the ACOD event. As the technical circumstances initiating a disconnect may vary, Firms are advised to call Trading Operations to confirm the status of ACOD eligible open orders remaining at Sapphire that were sent via the session(s) that disconnected.

The execution reports resulting from cancels or trades during a disconnect can be received upon a subsequent reconnect by the firm on the same day.

Auto Cancel on System Failure (ACOSF): In the event of a Matching Engine or FOI, process crash or hardware failure that prevents a Firm's interaction with existing open orders, members can opt in to have the system automatically cancel their open orders for the impacted session(s). In case of FOI failure, orders submitted via any of the member's other sessions will not be affected. In case of any Matching Engine failure, orders submitted to any Matching Engines that are not impacted will not be affected.

Members must select one of the following actions on a firm level and this action will be performed on the affected session(s):

- Cancel All Open Orders: All open orders in the impacted Matching Engine(s) or orders that were sent through the impacted FOI session(s) will be cancelled upon system failure.

- **Do Not Cancel All Open Orders:** This will disable Auto Cancel on System Failure and Sapphire will not cancel any open orders from that session upon system failure. This is the default behavior for the session if the member does not opt in for ACOSF.

Note: This feature is available starting from the Live Order Window (LOW) till the Option close time.

The ACOSF feature is provided on a best effort basis. Executions can occur while the ACOSF event is being processed. As the technical circumstances initiating an ACOSF may vary, firms are advised to contact Trading Operations to confirm the status of ACOSF eligible open orders remaining at Sapphire. The execution reports resulting from cancels or trades during the failure can also be received upon a subsequent reconnect, to primary or backup FOI, by the Firm on the same day.

Done for Day: For the firms that need status of orders at the end of day, Sapphire can send out a *DoneForDay* report for each order that is still open. Firms can request that Sapphire sends this report for DAY orders. ..

Executions/Busts/Adjustments: All executions are conveyed to firms via FOI and Sapphire FIX Drop. Busts (trade cancels) and adjustments (trade corrections) to Executions are not conveyed to firms via FOI. Firms can receive busts/adjustments via the Sapphire FIX Drop.

Poss Dup: Sapphire ignores the “Poss dup” flag in FIX header. Sapphire only checks for uniqueness of CIOrdID for the MPID for the day. Sending orders and subsequent actions against them over more than one port is strongly discouraged as it results in unpredictable outcomes due to sequencing of messages over multiple ports.

Flow control: Upon receipt of a FIX message, FOI will not read the firm facing port until it sends back the response. Firms that do not strictly follow a one-in-flight paradigm are advised to limit the number of in-flight FIX messages to less than 50 for optimal TCP protocol performance; i.e. under certain limited circumstances, exceeding this limit could result in shrinking window size and/or dropped packets.

Failure/Recovery: In the event of a catastrophic hardware problem servicing FOI, Sapphire will activate backup FOI services on alternative hardware with different IP addresses. Other than a change in IP address, the FIX session can be reestablished just as after a normal disconnect and resynchronized per normal FIX protocol. Note that selected outbound messages, from Sapphire to the Firm, in transition during the failure, may be sent **or resent** with PossResend=Y. Firms may have already seen some of these messages before, with lower sequence numbers, and should handle the possible duplicate communications. Sapphire will reject any retransmitted orders by checking CIOrdID uniqueness for each MPID.

Note that the backup FOIs are not available for connectivity testing during the trading day. Firms are encouraged to conduct failover testing to ensure seamless interaction during such events.

1.4 Configuration

Firms can configure their session(s) with the below properties.

Comp ID: All messages sent in either direction must contain SenderCompID and TargetCompID. Firms and Sapphire will agree upon the values, to be used for these fields, at the time of initial setup. Firms are allowed to use a single *Comp ID* for each connection. Sapphire will allow connections from a preconfigured computer (CompID).

Firm to Sapphire		Sapphire to Firm	
SenderCompID	TargetCompID	SenderCompID	TargetCompID
Firm Comp ID	SPHR	SPHR	Firm Comp ID

SenderSubID: All application messages sent in either direction must contain SenderSubID and TargetSubID. These are not required in administrative messages or User Notification Messages. Firms and Sapphire will agree upon the value, to be used for this field, at the time of initial setup. Firms send in their Executing Broker MPID (Firm MPID) in this field and Firms are allowed to get multiple such IDs from Sapphire. Firms can send in any of their IDs on each of their connections. Sapphire will use the clearing details associated with this MPID in addition to the clearing information supplied in the order message.

Firm to Sapphire			Sapphire to Firm	
	SenderSubID	TargetSubID	SenderSubID	TargetSubID
Sapphire Test Environment	Firm MPID	TEST	TEST	Firm MPID
Sapphire Prod Environment	Firm MPID	PROD	PROD	Firm MPID

IP Address: At the time of setup, Sapphire will require Firms source IPs and will allocate one or more Sapphire FIX server IPs to your firm as agreed upon by the Firm and Sapphire membership.

Port: At the time of setup, Sapphire will allocate one or more Sapphire FIX server ports as agreed upon by the Firm and Sapphire membership.

Done For Day: Firms can request Sapphire to configure their ports for receiving Done for Day reports at the end of the day for their open orders.

Order Protection: Sapphire provides a service to protect firms based on order size. These values can be set on a firm basis (not MPID level) and is calculated across all sessions belonging to a Firm.

Simple Orders

- **MaxOrderSize:** An order will be rejected if the OrderQty is greater than this value.
- **MaxCrossingOrderSize:** A Crossing order will be rejected if the OrderQty is greater than this value.
- **MaxOpenOrders:** Orders will be rejected if the total outstanding open order count is greater than this value.
- **MaxOpenContracts:** Orders will be rejected if the inbound OrderQty plus the number of open contracts is greater than the configured value.

Complex Orders

- **MaxComplexOrderSize:** An order (non-Crossing) will be rejected if the OrderQty is greater than this value.

- **MaxComplexCrossingOrderSize:** A Crossing order will be rejected if the OrderQty is greater than this value.
- **MaxComplexOpenOrders:** Orders will be rejected if the total outstanding complex open order count is greater than this value.
- **MaxComplexOpenContracts:** Orders will be rejected if the inbound sum of all components (OrderQty * LegRatio for each leg) plus the number of open contracts for complex orders is greater than the configured value.

Stock Clearing Account: Firms that choose to trade stock tied strategies must set up their Stock Clearing Account information (Underlying MPID or DTC Account Number) by coordinating with Trading Operations.

Check Sum verification: Firms can request the FIX Standard Trailer Check Sum calculation to be enabled or disabled. Enabled, the Sapphire system will perform standard FIX verification of messages and reject message that fail the test. Sapphire will not perform Check Sum calculations on inbound messages when disabled.

Risk Protection Monitoring: Firms participating in Sapphire Risk Protection Monitoring can manage Risk Notification messages on a per session basis. The configuration of notification messages can be coordinated with Trading Operations. Each notification type (solicited or un-solicited) is independently configurable to be forwarded or dropped.

Self-trade prevention: Market Maker orders receive self trade prevention at the firm level across all MPIDs of the firm. If a Market Maker order locks or crosses the opposite side interest of the same firm for the same product, it will be accepted and the contra side will be canceled.

Stock Symbol Format: LegSymbol will be in the OCC Options Underlying symbol format by default. Firms can opt to send/receive LegSymbol in the stock ticker format for stock leg trades of Complex stock-tied orders in messages "AB", "AC", "As" and "8". This can be configured per FOI port.

2. FIX Message Format and Delivery

Please refer to **FIX v4.2 Protocol** document (<http://www.fixtrading.org/standards>) for details about **FIX message format and delivery**. That section offers insights into the general format of a FIX message being comprised of a *standard header* followed by the message body fields and terminated with a *standard trailer*. It further states that the non-printing, ASCII “SOH” (#001, hex:0x01, referred to in this document as <SOH>) must be used as the field and message delimiter.

All tags must have a value specified. Optional fields without values should not be specified in the FIX message. An order that contains a missing required tag, or a tag with no associated value, will be rejected back to the user.

Data Types:

- Price field formats are specified in the messages
- Char String fields are case sensitive unless otherwise noted

2.1 Standard Message Header

The Standard Header precedes each administrative or application message in the FIX protocol. The header identifies the message type, length, destination, sequence number, origination point, and time. The following table contains the Standard Header tags processed by Sapphire. Any other header tag will be ignored.

Tag	FIX Name	Req'd	Details
8	BeginString	Yes	Always the first field in a FIX message. Valid value: FIX.4.2
9	BodyLength	Yes	Always the second field in a FIX message. Length of message expressed as the number of characters in the message following the BodyLength field up to, and including, the delimiter immediately preceding the CheckSum tag (“10=”).

Tag	FIX Name	Req'd	Details
35	MsgType	Yes	<p>Always the third field in a FIX message. Defines the message type.</p> <p>Valid values - Administrative messages: '0' = Heartbeat '1' = Test Request '2' = Resend Request '3' = Reject (Session level reject) '4' = Sequence Reset '5' = Logout 'A' = Logon</p> <p>Valid values – Application messages: '8' = Execution Report '9' = Single Order Cancel Reject 'D' = New Order Single 'F' = Single Order Cancel Request 'G' = Single Order Cancel/Replace 'H' = Order Status Request 'j' = Reject (Business message reject) 's' = New Order Cross "AB" = New Order – Multileg "AC" = Order Cancel/Replace – Multileg "AS" = New Order Cross - Multileg</p>
34	MsgSeqNum	Yes	Message sequence number (numeric).
43	PossDupFlag	No	Ignored
49	SenderCompID	Yes	Identifies the party sending the message. The sending firm should use their Line Identifier as assigned by Sapphire. Sapphire will use "Sapphire" when sending the messages to Firms.
50	SenderSubID	Cond.	Sub identifier of the party sending the message. Required for application messages sent from Firm to Sapphire. See Configuration section (1.4 Configuration) for more detail.
52	SendingTime	Yes	Time of message transmission expressed in UTC (Universal Time Coordinated), also known as GMT. This value must be within 60 seconds of the current time; else the order will be rejected. Format: YYYYMMDD–HH:MM:SS.uuu

Tag	FIX Name	Req'd	Details
56	TargetCompID	Yes	Identifies the party receiving the message. Firms should use the value "Sapphire." Sapphire will use the Firm's Line ID when sending the messages to Firms.
57	TargetSubID	Cond.	Sub identifier of the party receiving the message. Required for application messages delivered to the firms from Sapphire. See Configuration section (1.4 Configuration) for more detail.
97	PossResend	No	Ignored in messages sent to Sapphire. Set to Y in messages from Sapphire during certain failure/recovery scenarios.
115	OnBehalfOfCompID	Cond.	Only applicable to messages sent to Sapphire: Identifies the end client that is the originator of the message. This will be returned in the DeliverToCompID of messages corresponding to this message.
116	OnBehalfOfSubID	Cond.	Only applicable to messages sent to Sapphire: Sub identifier of the end client. This will be returned in the DeliverToSubID of messages corresponding to this message.
122	OrigSendingTime	Cond.	Required for resent messages. If no data is available, this value is set to the SendingTime value. Format: YYYYMMDD-HH:MM:SS.uuu
128	DeliverToCompID	Cond.	Only applicable to messages sent from Sapphire: Sapphire will reflect back the data sent in OnBehalfOfCompID field.
129	DeliverToSubID	Cond.	Only applicable to messages sent from Sapphire: Sapphire will reflect back the data sent in OnBehalfOfSubID field.

2.2 Standard Message Trailer

The Standard Trailer terminates each administrative or application message in the FIX protocol. The trailer is used to segregate messages and contains the three-digit character representation of the Check Sum value. Tag must be present even for Firms that have disabled Check Sum validation.

The following table contains the Standard Trailer tags processed by Sapphire. Any other Trailer tag will be ignored.

Tag	FIX Name	Req'd	Details
10	Checksum	Yes	Always the last field of a FIX message.

3. Session Protocol

Please refer to **FIX v4.2 Protocol** document (<http://www.fixtrading.org/standards>) for details about **FIX session protocol**. This protocol layer offers session management capabilities such as establishing a FIX session, authentication, application/administrative messaging over TCP/IP, sequencing of messages, heartbeats and gap fills.

Order sending firm will always be the *Initiator* of the FIX session and Sapphire is the *Acceptor*.

4. Administrative Messages

This section consists of administrative messages such as those that are used for session protocol.

4.1 Logon Request (MsgType = A)

Please refer to **FIX v4.2 Protocol** document for details about **FIX Logon Request**.

The logon message authenticates a user establishing a connection to a remote system. The logon message must be the first message sent by the Firm that needs to initiate a FIX session with FOI. Firms must wait for a Logon message as a response from FOI before sending other messages.

The message format is as follows:

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = A
95	RawDataLength	Cond	The number of bytes in RawData. When used, it must be set to 1. Omit tags 95 & 96 when Auto Cancel on Disconnect (ACOD) is not required.
96	RawData	Cond	Raw data that contains custom information and is of the length specified in RawDataLength. Valid Values: "1" = Activate Auto Cancel on Disconnect (ACOD) on disconnect or graceful logout
98	EncryptMethod	Yes	(always unencrypted)
108	HeartBtInt	Yes	Value specified in seconds. Note: Must be > 0 and same value must be used by both sides.
141	ResetSeqNumFlag	No	Indicates both sides of a FIX session should reset sequence numbers
	<i>Standard Trailer</i>	Yes	

Points to note:

- Firms can specify a heartbeat interval that is greater than zero and FOI will use the same. Both sides must use that same interval to check if the other side is alive. A Heartbeat interval of 5 seconds is recommended. Upon missing of a single heartbeat, FOI will send a *Test Request*. Upon missing of 2 heartbeats, FOI will send a logout and terminate the connection. Sapphire recommends using as low of a value the reliability and latency of your telecommunications channel will allow.
- Encryption is not supported and hence the EncryptMethod field is ignored.
- When Firms reconnect due to a loss of connection, the login response from Sapphire may contain a sequence number greater than what the firm expects. This will require the Firm to follow the FIX resend protocol to do a gap fill. Sapphire will initiate a similar gap fill process if Sapphire detects a gap. Sapphire will also reject orders with a SendingTime > 60 seconds.

- Auto Cancel on Disconnect (ACOD): In order to activate the feature for the session, both tag 95 and 96 must be present and both must be set to 1. If one tag is present and the other is absent, the Logon request is rejected.

4.2 Heartbeat (MsgType = 0)

Please refer to **FIX v4.2 Protocol** document for details about **FIX Heartbeat**.

The heartbeat format is as follows:

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = 0
112	TestReqID	Cond	Required when the heartbeat is the result of a Test Request message.
	<i>Standard Trailer</i>	Yes	

Points to note:

- Check the Logon message for details about the heartbeat interval
- Each side must send a heartbeat only when the agreed upon interval has elapsed since the last message was sent.

4.3 Test Request (MsgType = 1)

Please refer to **FIX v4.2 Protocol** document for details about **FIX Test Request**.

The test request message forces a heartbeat from the opposing application. The test request message checks sequence numbers or verifies communication line status. The opposite application responds to the Test Request with a Heartbeat containing the TestReqID.

The heartbeat format is as follows:

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = 1
112	TestReqID	Yes	
	<i>Standard Trailer</i>	Yes	

Points to note:

- If heartbeat interval + 1 second has elapsed since the last message was received, a Test request can be issued. After two such iterations, the connection must be dropped. This ensures a proactive detection and cleanup of a broken TCP connection.

4.4 Resend Request (MsgType = 2)

Please refer to **FIX v4.2 Protocol** document for details about **FIX Resend Request**.

The message format is as follows:

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = 2
7	BeginSeqNo	Yes	
16	EndSeqNo	Yes	
	<i>Standard Trailer</i>	Yes	

4.5 Reject – Session Level (MsgType = 3)

Please refer to **FIX v4.2 Protocol** document for details about **FIX Reject (session level)**.

FOI will disregard any message that is garbled, cannot be parsed or fails a data integrity check. Sapphire will also terminate the connection.

The message format is as follows:

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = 3
45	RefSeqNum	Yes	MsgSeqNum of rejected message
371	RefTagID	Cond	Required if reject reason refers to a specific tag
372	RefMsgType	Yes	The MsgType of the FIX message being referenced
373	SessionRejectReason	Yes	Code to identify reason for a session-level Reject message Valid Values: “0” = Invalid tag number “1” = Required tag missing “2” = Tag not defined for this message type “3” = Undefined tag “4” = Tag specified without a value “5” = Value is incorrect (out of range) for this tag “6” = Incorrect data format for value “7” = *Unused/Not applicable* “8” = *Unused/Not applicable* “9” = Comp ID problem “10” = SendingTime accuracy problem “11” = Invalid MsgType
58	Text	No	Will be supplied if there is a need to supply more information regarding the reject
	<i>Standard Trailer</i>	Yes	

4.6 Sequence Reset (MsgType = 4)

Please refer to **FIX v4.2 Protocol** document for details about **FIX Sequence Reset (Gap Fill)**.

The message format is as follows:

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = 4
123	GapFillFlag	No	
36	NewSeqNo	Yes	
	<i>Standard Trailer</i>	Yes	

4.7 Logout Request (MsgType = 5)

Please refer to **FIX v4.2 Protocol** document for details about **FIX Logout Request**.

The logout message initiates or confirms the termination of a FIX session. Disconnection without the exchange of logout messages will be interpreted as an abnormal condition.

Before actually closing the session, the logout initiator must wait for the opposite side to respond with a confirming logout message. This gives the remote end a chance to perform any Gap Fill operations that may be necessary. The session may be terminated if the remote side does not respond in 5 minutes.

After sending the Logout message, the logout initiator should not send any messages unless requested to do so by the logout acceptor via a ResendRequest.

The message format is as follows:

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = 5
58	Text	N	Can be used to send readable information to the recipient. FOI will just log this and no alerts will be generated on any human readable display devices.
	<i>Standard Trailer</i>	Yes	

5. Application Messages

This section consists of application messages such as Order messages, cancel requests and execution reports.

5.1 New Order - Single (MsgType = D)

Users can send new orders to the Sapphire exchange with the New Order Single message (MsgType = D). The following table contains the fields Sapphire supports for the New Order Single message.

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = D
1	Account	No	Customer ID defined by the firms. Maximum length 10 characters. FOI will pass this through for clearing.
11	CIOrdID	Yes	Unique identifier of the order as assigned by the firm for the MPID used to populate the SenderSubID. Must be 30 characters or less. Uniqueness must be guaranteed within a single trading day for an MPID regardless of FIX Session.
18	ExecInst	No	Valid values: f = Inter-market Sweep Order (ISO) o = Auto Cancel on connection loss (Firm requesting Auto Cancel on Disconnect (ACOD) for this Order) Note: If any other value is present the order will be rejected.
38	OrderQty	Yes	Number of contracts specified on the order. Valid Range: 1 to 999,999. Max length 6.
40	OrdType	Yes	Valid values: 1 = Market 2 = Limit
44	Price	Cond	Price for limit orders (OrdType = 2) Format follows standard OCC clearing format where a combined total digits before and after the decimal is 8 or less. 4 digits before the decimal can have 4 after Valid range published via Technical Circular Price should not be specified on market orders
54	Side	Yes	Side of order. Valid values: 1 = Buy 2 = Sell

FIX Tag	FIX Name	Req'd	Details
55	Symbol	Yes	The 6 character OCC Security Symbol (Class) for an option.
59	TimeInForce	Yes	Specifies how long the order remains in effect. Valid values: 0 = DAY 3 = IOC (Immediate or Cancel)
60	TransactTime	Yes	Time of execution/order creation expressed in UTC (Universal Time Coordinated), also known as GMT. Format: YYYYMMDD–HH:MM:SS.uuu
76	ExecBroker	No	Specifies order handling. Valid values: “DNR” = Do not route (Trade at Sapphire or post to Sapphire book. Never route away) Default: If this tag is absent, the order may be eligible for routing as per Sapphire routing rules.
77	OpenClose	Cond	Specifies if this order opens a position or closes a position. Required except when CustomerOrFirm set to 4 = Market Maker or 5 = Non-Member Market Maker Valid values: O = Open C = Close.
167	SecurityType	Yes	Identifies type of instrument. Valid value = OPT (Options)
200	MaturityMonthYear	Yes	Expiration month and year. Format: YYYYMM (For example, 201009 is an expiration of September 2010.)
201	PutOrCall	Yes	Indicates whether an option is a put or a call. Valid values: 0 = Put 1 = Call
202	StrikePrice	Yes	Strike price for an option.
203	CoveredOrUncovered	No	Specifies whether the option position is covered or uncovered. Valid values: 0 = Covered 1 = Uncovered

FIX Tag	FIX Name	Req'd	Details
204	CustomerOrFirm	Yes	Specifies the order origin type. Valid values: 0 = Priority Customer 1 = Firm 2 = Broker/Dealer 4 = Market Maker (MM) 5 = Non-Member Market Maker 8 = Non-Priority Customer
205	MaturityDay	Yes	Expiration day of month, used along with MaturityMonthYear (200) to fully specify the maturity date for options. Format: DD (single digit allowed)
439	ClearingFirm	No	CMTA information of Order originator's clearing firm. Valid range: 1 – 99999
440	ClearingAccount	Cond	OCC sub-account (Multi-account). This is a required value for Non-member MM orders. Sapphire Member MM can send their MPID in this tag in lieu of tag 109 It must be an UPPERCASE alphanumeric value, with a maximum of 5 characters. A value with up to 3 characters is generally used. (see Notes section below)
109	ClientID	Cond	For Sapphire member Market Maker orders, MMs can send their MPID with this tag. Sapphire Member MM can send in their MPID in tag 440 in lieu of tag 109 (see notes section below)
58	Text	No	Additional clearing information for the order that Sapphire will send to OCC. Max 13 characters.

FIX Tag	FIX Name	Req'd	Details
1090	MaxPriceLevels	No	<p>MIAX Variable Protection (MVP) Unspecified (tag absent) = Use default configured in Sapphire system. Valid Values to override Sapphire default setting: 0 = Order is eligible to trade only at its Initial Reference Price (IRP). 1 through 20 = Maximum number of ticks (MPVs) that the order may trade beyond its IRP before being canceled back. Note that this MVP is capped to maximum allowed by Sapphire. Greater than 20 = Order will be rejected. Changes to default or maximum value will be communicated via Technical circulars.</p>
	<i>Standard Trailer</i>	Yes	

Points to note:

- **Order Validation:** Sapphire exchange will validate each order it receives by checking that the user sent all the required FIX fields for the order. FIX field level validation failure will result in a session reject. Business rule validation failures will result in rejection in the form of an Execution Report (MsgType = 8) with an Execution Type of Rejected (ExecType = 8). When the Firm message passes FIX field level validations and Business rule level validation and still has to be rejected, Sapphire will send a Business reject message for them. Once the Order is accepted and Acked, any further Business rule validations that fail will result in an unsolicited cancel.
- **Order Acknowledgement:** Upon receipt of an order, Sapphire validates the order and then sends an acknowledgement back to the client. This acknowledgement tells the user that a Sapphire Matching Engine has received the order and has started to process it. This acknowledgement is in the form of an Execution Report (MsgType = 8) with an Execution Type of New (ExecType = 0) and an Order Status of New (OrdStatus = 0). See the section “Execution Report (MsgType = 8)” for more information about the individual Execution Report fields.
- Sapphire member Market Maker orders must be identified with their MPID. For flexibility, the MPID can be sent in either tag 440 or 109. When both tags have values, Sapphire will validate them for equivalence and reject otherwise.
- Please refer to Sapphire regulatory circulars for the MIAX Variable Protection default setting and Order types that support MIAX Variable Protection.
- **Auto Cancel on Disconnect (ACOD):** Firms wishing to use the Sapphire Auto Cancel on Disconnect feature on an order-by-order basis must send each order that they want Sapphire to cancel upon disconnect with ExecInst=0. Orders that do not have this specified will not be canceled upon disconnect. Please refer to the FAQs for details on the Auto Cancel on Disconnect feature.

5.2 New Order Cross (MsgType = s)

New Order Cross message enables firms to send Customer-to-Customer Cross (C2C) orders, Qualified Contingent Cross (QCC) orders. This is a FIX 4.3 Message supported over our 4.2 session.

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = s (lowercase s)
548	CrossID	Yes	Identifier for a cross order. Must be 30 characters or less. Sapphire recommends firms to maintain uniqueness across New Order Cross (MsgType = s) and New Order Cross – Multileg (MsgType = As) within a single trading day for the EEM across all FOIs for the firm
549	CrossType	Yes	Valid Values: 4 = Customer-to-Customer Cross(C2C) 6 = Qualified Contingent Cross (QCC)
552 <i>Repeating Group</i>	NoSides	Yes	Must set to a value of 2 When CrossType (549) = 4 (C2C) <ul style="list-style-type: none"> • both are Priority Customer orders and tag 204 is validated to ensure it is set to "0" • first order is the Initiator Side • second order is the Contra Side When CrossType (549)= 6 (QCC): <ul style="list-style-type: none"> • first order is the Agency Side • second order is the Contra Side
→ 54	Side	Yes	Side of order. Valid values: 1 = Buy 2 = Sell <u>Required tag to start each repeated group.</u>

FIX Tag		FIX Name	Req'd	Details
→	11	ClOrdID	Yes	<p>Unique identifier of the order as assigned by the firm for the MPID used to populate the SenderSubID. Must be 30 characters or less.</p> <p>Uniqueness must be guaranteed within a single trading day for an MPID regardless of FIX Session.</p>
→	78 <i>Repeating Group</i>	NoAllocs	Yes	<p>Number of Repeating groups for pre-trade allocation.</p> <p>Must be set from 1 to max value of 10 for Cross Type (549) = 6 (QCC)</p> <p>Must be set to 1 for Cross Type (549) = 4 (C2C).</p> <p>(see Notes section Clearing Details below)</p>
→	→ 80	AllocQty	Yes	<p>Quantity to be allocated to specific sub-account.</p> <p>Valid Range: 1 to 999,999. Max length 6.</p> <p><u>Required tag to start each repeated group.</u></p>
→	→ 1	Account	No	<p>Customer ID defined by the firms. Maximum length 10 characters. FOI will pass this through for clearing.</p>
→	→ 58	Text	No	<p>Additional clearing information for the order that Sapphire will send to OCC. Max 13 characters.</p>
→	→ 77	OpenClose	Cond	<p>Specifies if this order opens a position or closes a position. Required except when CustomerOrFirm set to 4 = Market Maker or 5 = Non-Member Market Maker</p> <p>Valid values: O = Open C = Close</p>

FIX Tag			FIX Name	Req'd	Details
→	→	204	CustomerOrFirm	Yes	<p>Specifies the order origin type.</p> <p><u>Valid values:</u> When Tag 549=4 (Customer-To-Customer Cross)</p> <p>0 = Priority Customer(other values will be rejected)</p> <p><u>Valid values:</u> When Tag 549=6 (QCC)</p> <p>Agency and Contra Side</p> <p>0 = Priority Customer</p> <p>1 = Firm</p> <p>2 = Broker/Dealer</p> <p>4 = Market Maker (MM)</p> <p>5 = Non-Member Market Maker</p> <p>8 = Non-Priority Customer</p>
→	→	203	CoveredOrUncovered	No	<p>Specifies whether the option position is covered or uncovered.</p> <p><u>Valid values:</u></p> <p>0 = Covered</p> <p>1 = Uncovered</p>
→	→	439	ClearingFirm	No	<p>CMTA information of Order originator's clearing firm.</p> <p><u>Valid range:</u></p> <p>1 – 99999</p>
→	→	440	ClearingAccount	Cond	<p>OCC sub-account (Multi-account).</p> <p>This is a required value for Non-member MM orders.</p> <p>Sapphire Member MM can send their MPID in this tag.</p> <p>It must be an UPPERCASE alphanumeric value, with a maximum of 5 characters. A value with up to 3 characters is generally used.</p> <p>(tag 109 is not available as in MsgType (D))</p>

FIX Tag			FIX Name	Req'd	Details
→	→	467	IndividualAllocID	Cond	<p>Unique identifier for a specific NoAllocs repeating group instance. Only validated for Contra Order when NoAlloc > 1. Uniqueness is for this order only. Not validated across orders.</p> <p>AlphaNumeric, Max length = 4</p>
→	→	9946	FirmMPID	Yes	<p>Executing Broker MPID (Firm MPID)</p> <p>(See notes section Clearing Details below)</p>
		38	OrderQty	Yes	<p>Number of contracts to cross.</p> <p>When CrossType (549) =6 (QCC), OrderQty must be minimum 1,000 or order will be rejected.</p> <p>Valid Range: 1 to 999,999. Max length 6.</p>
		40	OrdType	Yes	Valid values: 2 = Limit
		44	Price	Yes	<p>Price for limit orders (OrdType = 2)</p> <p>Valid ranges published via Technical Circular</p>
		55	Symbol	Yes	The 6 character OCC Security Symbol (Class) for an option.
		60	TransactTime	Yes	<p>Time of execution/order creation expressed in UTC (Universal Time Coordinated), also known as GMT.</p> <p>Format: YYYYMMDD–HH:MM:SS.uuu</p>
		167	SecurityType	Yes	<p>Identifies type of instrument.</p> <p>Valid value = OPT (Options)</p>
		200	MaturityMonthYear	Yes	<p>Expiration month and year.</p> <p>Format: YYYYMM (For example, 201009 is an expiration of September 2010.)</p>

FIX Tag	FIX Name	Req'd	Details
201	PutOrCall	Yes	Indicates whether an option is a put or a call. Valid values: 0 = Put 1 = Call
202	StrikePrice	Yes	Strike price for an option.
205	MaturityDay	Yes	Expiration day of month, used along with MaturityMonthYear (200) to fully specify the maturity date for options. Format: DD (single digit allowed)
810	UnderlyingPrice	No	Execution price of the NMS stock trade associated with this QCC order. Max 11 bytes. Only relevant for QCC Order (549=6).
879	UnderlyingQty	No	Traded quantity of the NMS stock trade associated with this QCC order. Max 9 bytes. Only relevant for QCC Order (549=6).
9463	BillingTradeType	No	One byte optional billing data. Valid values published via Technical Circular Non valid values will be ignored.
9811	PriceDelta	No	The delta of the NMS stock trade associated with the QCC order. Max 11 bytes. Only relevant for QCC Order (549=6).
9812	UnderlyingExecutionTime	No	Time of execution of the NMS stock trade associated with this QCC order. Only relevant for QCC Order (549=6). Format: HH:MM:SS (EST)
9813	UnderlyingExecutionExchange	No	Executing exchange of the NMS stock trade associated with this QCC order. Max 4 bytes. Can be MIC code or Exchange code. Only relevant for QCC Order (549=6).
	<i>Standard Trailer</i>	Yes	

Points to note:

- Execution Reports: Sapphire will send individual execution report for each side for Ack, Reject, and Done events. Trade Reports, or execution reports of type fill and partial fill, will be sent for

the agency side and each Contra side allocation. For example, if a New Order Cross had three contra side allocations, the Firm will receive six trade reports. Three executions will be generated for the agency side and one for each contra allocation.

- **Clearing Details:** As stated in section 1.4 sub-section “SenderSubID”, Sapphire will use the clearing details associated with the MPID in the SenderSubID in addition to the clearing information supplied in the new order message. The default clearing information for the First Priority Customer order for Customer-to-Customer Cross type, is set using the SenderSubID (Tag 9946 for the Agency order or the First Priority Customer order in the NoAlloc repeating group must equal the SenderSubID or the order will be rejected). Additional alternative clearing details can be specified via the available NoAlloc repeating group tags (See example below). The Contra Order can have up to 10 Pre-Trade allocations. Each Contra allocation will use tag 9946 (Firm MPID), versus SenderSubID as the default clearing information plus additional clearing in the NoAlloc repeating group (See example below).
- **QCC Order:** NMS stock trade information associated with QCC order (tags: 810, 879, 9811, 9812, 9813) is not validated and will be truncated if it exceeds the specified field limits. QCC Order will be accepted even if this information is missing, invalid or exceeds the field limits.
- **Example FIX Message:** Here is an example New Order Cross Message with the Contra Side having three Pre-Trade allocations. Yellow highlight is agency order. Blue is the Contra order. The grey area are the three contra allocations.

```

5.3 New Order – Multileg (MsgType = AB)

Users can send complex orders to the Sapphire exchange with the New Order Multileg message (MsgType = AB). The following table contains the fields Sapphire supports.

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = AB
1	Account	No	Customer ID defined by the firms. Maximum length 10 characters. FOI will pass this through for clearing.
11	ClOrdID	Yes	<p>Unique identifier of the order as assigned by the firm for the MPID used to populate the SenderSubID. Must be 30 characters or less.</p> <p>Uniqueness must be guaranteed within a single trading day for an MPID regardless of FIX Session.</p>

FIX Tag	FIX Name	Req'd	Details
18	ExecInst	No	Valid values: 0 = Auto Cancel on connection loss (Firm requesting Auto Cancel on Disconnect (ACOD) for this Order) Note: If any other value is present the order will be rejected.
38	OrderQty	Yes	Number of strategies specified on the order. Valid Range: Must be positive. The absolute value of the highest Option Leg Ratio of the strategy multiplied by the OrderQty must be less or equal to 999,999. The absolute value of the Stock Leg Ratio of the strategy, if present, multiplied by the OrderQty must be less or equal to 99,999,999.
40	OrdType	Yes	Valid values: 1 = Market (market order acceptance is set by the exchange. Please refer to Sapphire circulars for the current setting) 2 = Limit
44	Price	Cond	The net price of the spread. This tag is required for Limit orders. To the customer that enters the order: <ul style="list-style-type: none"> • Debit (positive) – Willing to pay • Credit (negative) – Wants cash back • 0 (zero) – Even orders Format is limited to max 4 decimal places for stock-tied orders and 2 decimal places for all other orders. Price should not be specified on market orders. Sapphire will not accept an order where a leg can print higher than max price for a simple order.
59	TimeInForce	Yes	Specifies how long the order remains in effect. Valid values: 0 = DAY 3 = IOC (Immediate or Cancel)

FIX Tag	FIX Name	Req'd	Details
60	TransactTime	Yes	Time of execution/order creation expressed in UTC (Universal Time Coordinated), also known as GMT. Format: YYYYMMDD–HH:MM:SS.uuu
167	SecurityType	Yes	Identifies type of instrument. Valid value = MLEG (Multileg)
204	CustomerOrFirm	Yes	Specifies the order origin type. Valid values: 0 = Priority Customer 1 = Firm 2 = Broker/Dealer 4 = Market Maker (MM) 5 = Non-Member Market Maker 8 = Non-Priority Customer
439	ClearingFirm	No	CMTA information of Order originator's clearing firm. Valid range: 1 – 99999
440	ClearingAccount	Cond	OCC sub-account (Multi-account). This is a required value for Non-member MM orders. Sapphire Member MM can send their MPID in this tag in lieu of tag 109 It must be an UPPERCASE alphanumeric value, with a maximum of 5 characters. A value with up to 3 characters is generally used. (see Notes section below)
528	OrderCapacity	Cond	<i>Stock leg only</i> Specifies firm's capacity for the stock leg. Valid values: A = Agency P = Principal R = Riskless Principal

FIX Tag	FIX Name	Req'd	Details
109	ClientID	Cond	For Sapphire member Market Maker orders, MMs can send their MPID with this tag. Sapphire Member MM can send in their MPID in tag 440 in lieu of tag 109 (see notes section below)
58	Text	No	Additional clearing information for the order that Sapphire will send to OCC. Max 13 characters.
9018	MIAXExecInst	No	Sapphire Specifies Execution Instructions. Valid values: P = ABBO Price Protection (APP) Note: If any other value is present the order will be rejected. See "Points to Note" section for formatting instructions
9372	StockClearingAccount	No	<i>Stock-tied Orders only</i> Underlying MPID or DTCC account for the Stock leg of this order.
555	NoLegs	Yes	Number of Legs of the order Valid values: 2 – 13 (max of 12 Option legs)
→ 600	LegSymbol	Yes	For Option Leg: The 6 character OCC Security Symbol (Class) for an option. For Stock Leg: The OCC Options underlying symbol (default) or stock ticker symbol (configurable) Note: This Field is used to delimit the repeating group.
→ 608	LegCFIcode	Yes	CFI code for the individual leg Valid values: OC = Option call OP = Option put ES = Equity Shares

FIX Tag	FIX Name	Req'd	Details
→ 611	LegMaturityDate	Cond	<i>Option leg only</i> Expiration Date in the YYYYMMDD format.
→ 612	LegStrikePrice	Cond	<i>Option leg only</i> Strike price for an option.
→ 623	LegRatioQty	Yes	The ratio of this individual leg. Number of option contracts or stock shares for this leg is: LegRatioQty * OrderQty Valid Range: For Option leg: 1-99,999 For Stock leg: 1-9,999,999 The absolute value of the highest Option Leg Ratio of the strategy multiplied by the OrderQty must be less or equal to 999,999. The absolute value of the Stock Leg Ratio of the strategy, if present, multiplied by the OrderQty must be less or equal to 99,999,999.
→ 624	LegSide	Yes	The side of this individual leg Valid values are: 1 = Buy 2 = Sell 5 = Sell Short (for stock leg) 6 = Sell Short Exempt (for stock leg)
→ 654	LegRefID	Yes	Used to identify a specific leg. Firm assigned ID must not exceed 5 characters.
→ 564	LegPositionEffect	Cond	<i>Option leg only</i> The valid values are: O = Open C = Close

FIX Tag	FIX Name	Req'd	Details
→ 565	LegCoveredOrUncovered	No	<p><i>Option leg only</i></p> <p>Specifies whether the option position is covered or uncovered.</p> <p>Valid values: 0 = Covered 1 = Uncovered</p>
	<i>Standard Trailer</i>	Yes	

Points to note:

- **Order Validation:** Sapphire will validate each order it receives by checking that the user sent all the required FIX fields for the order. FIX field level validation failure will result in a session reject. Business rule validation failures will result in rejection in the form of an Execution Report (MsgType = 8) with an Execution Type of Rejected (ExecType = 8). When the Firm message passes FIX field level validations and Business rule level validation and still has to be rejected, Sapphire will send a Business reject message. Once the Order is accepted and Acked, any further Business rule validations that fail will result in an unsolicited cancel.
- **Order Acknowledgement:** Upon receipt of an order, Sapphire validates the order and then sends an acknowledgement back to the client. This acknowledgement tells the user that Sapphire has received the order, but has not yet processed it. This acknowledgement is in the form of an Execution Report (MsgType = 8) with an Execution Type of New (ExecType = 0) and an Order Status of New (OrdStatus = 0). See the section “Execution Report (MsgType = 8)” for more information about the individual Execution Report fields.
- **Auto Cancel on Disconnect (ACOD):** Firms wishing to use the Sapphire Auto Cancel on Disconnect feature on an order-by-order basis must send each order that they want Sapphire to cancel upon disconnect with ExecInst=0. Orders that do not have this specified will not be canceled upon disconnect. Please refer to the FAQs for details on the Auto Cancel on Disconnect feature.
- Sapphire member Market Maker orders must be identified with their MPID. For flexibility, the MPID can be sent in either tag 440 or 109. When both tags have values, Sapphire will validate them for equivalence and reject otherwise.
- **Quantity and Ratios:** Legs must always be entered where the OrderQty is the Greatest Common Factor of the legs quantities.
Example: An order to Buy 1 SeriesABC, Sell 2 SeriesXYZ, Qty 100 should not be entered as Buy 100 SeriesABC, Sell 200 SeriesXYZ, Qty 1.
- **Order Pricing:** Limit price supplied with the order is assumed to be for the unit leg ratio quantity.
Example: A \$2 debit for 100 units of leg ratio of 1:2 yielding \$2 debit for 100 units, \$200 debit for the entire order.
- **Tag 9018:** Formatting is the same as standard FIX Tag 18. If more than one instruction is applicable to an order, this field can contain multiple instructions delimited by a space.
- **Tag 555 (NoLegs):** Complex orders can have two to thirteen legs. Stock-tied orders must have exactly one stock leg plus one to twelve option legs. Option legs can only be for standard options. Leg repeating group is delimited by tag LegSymbol.

- The order is Acked with Execution Reports for each instrument leg defined.
- Rejects are communicated with a single Execution Report.
- Max valid Net Price: Sapphire will not accept an order where a leg can be printed higher than max price for a simple order. Please refer to Sapphire circulars for the current default setting.

Example FIX Message: Example of New Order Multileg message with stock leg. Stock leg is highlighted in yellow and its attributes are in **BOLD**. The grey area represents the option leg(s).

5.4 New Order Cross – Multileg (MsgType = As)

New Order Cross – Multileg message (MsgType = As) enables firms to send Complex Customer-to-Customer Cross (cC2C) orders and Qualified Contingent Cross (cQCC). This is a custom FIX message supported over our FIX 4.2 session.

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = As (uppercase A, lowercase s)
548	CrossID	Yes	Identifier for a cross order. Must be 30 characters or less. Sapphire recommends firms to maintain uniqueness across New Order Cross (MsgType = s) and New Order Cross – Multileg (MsgType = As) within a single trading day for the EEM across all FOIs for the firm
549	CrossType	Yes	Valid Values: 4 = cC2C 6 = cQCC
40	OrdType	Yes	Valid values: 2 = Limit Market Orders not supported
44	Price	Yes	The net price of the spread from the perspective of the customer that originates the order (first order in the message): <ul style="list-style-type: none"> • Debit (positive) – Willing to pay • Credit (negative) – Wants cash back • 0 (zero) – Even orders Can be up to 4 decimal places for stock-tied cQCC and must be 2 decimal places for all other orders including stock-tied cC2C.
38	OrderQty	Yes	Number of strategies to cross. When CrossType (549) =6 (cQCC), (OrderQty * min LegRatio) must be minimum 1000 or order will be rejected. Valid Range: Must be positive.

FIX Tag		FIX Name	Req'd	Details
				<p>The absolute value of the highest Option Leg Ratio of the strategy multiplied by the OrderQty must be less or equal to 999,999.</p> <p>The absolute value of the Stock Leg Ratio of the strategy, if present, multiplied by the OrderQty must be less or equal to 99,999,999.</p>
	73 <i>Repeating Group</i>	NoOrders	Yes	<p>Must be set to a value of 2.</p> <p>When CrossType (549)= 6 (cQCC):</p> <ul style="list-style-type: none"> • first order is the Agency Side • second order is the Contra Side <p>When CrossType (549)=4 (cC2C):</p> <ul style="list-style-type: none"> • both are Priority Customer orders and tag 204 is validated to ensure it is set to "0" • first order is the Initiator Side • second order is the Contra Side
➔	11	CIOrdID	Yes	<p>Unique identifier of the order as assigned by the firm for the MPID used to populate the SenderSubID.</p> <p>Must be 30 characters or less.</p> <p>Uniqueness must be guaranteed within a single trading day for an MPID regardless of FIX Session.</p> <p><u>Required tag to start each repeated group.</u></p>
➔	78 <i>Repeating Group</i>	NoAllocs	Yes	<p>Number of Repeating Groups for pre-trade allocation.</p> <p>Must be set to 1. Future phase may support Contra Side NoAllocs > 1 for Cross Type (549) = 6 (cQCC).</p> <p>(See Notes section "Clearing Details" below)</p>

FIX Tag			FIX Name	Req'd	Details
→	→	80	AllocQty	Yes	Quantity to be allocated to specific sub-account. Valid Range: 1 to 999,999. Max length 6. <u>Required tag to start each Repeating Group.</u> (See Notes section below)
→	→	1	Account	No	Customer ID defined by the firms. Max length 10 characters. FOI will pass this through for clearing.
→	→	58	Text	No	Additional clearing information for the order that Sapphire will send to OCC. Max 13 characters.
→	→	204	CustomerOrFirm	Yes	Specifies the order origin type. <u>Valid values:</u> When CrossType (549)=4 (cC2C): 0 = Priority Customer When CrossType(549)=6 (cQCC): Agency and Contra Side 0 = Priority Customer 1 = Firm 2 = Broker/Dealer 4 = Market Maker (MM) 5 = Non-Member Market Maker 8 = Non-Priority Customer
→	→	439	ClearingFirm	No	CMTA information of Order originator's clearing firm. Valid range: 1 – 99999

FIX Tag			FIX Name	Req'd	Details

	9811	PriceDelta	No	<p>The delta of the NMS stock trade associated with the cQCC order. Max 11 bytes. Only relevant for cQCC Order (549=6).</p>

FIX Tag	FIX Name	Req'd	Details
9812	UnderlyingExecutionTime	No	Time of execution of the NMS stock trade associated with this cQCC order. Only relevant for cQCC Order (549=6). Format: HH:MM:SS (EST)
9813	UnderlyingExecutionExchange	No	Executing exchange of the NMS stock trade associated with this cQCC order. Max 4 bytes. Can be MIC code or Exchange code. Only relevant for cQCC Order (549=6).
	<i>Standard Trailer</i>	Yes	

Points to note:

- **Execution Reports:** Sapphire will send individual execution report for each side for Ack, Reject, and Done events. Trade Reports, or execution reports of type fill and partial fill, will be sent for the Agency side and each Contra side allocation per leg. For example, a New Order Cross with six legs; the Firm will receive twelve trade reports. Six executions will be generated for the Agency side and six for the Contra side.
- **Clearing Details:** As stated in section 1.4 sub-section “SenderSubID”, Sapphire will use the clearing details associated with the MPID provided in SenderSubID, in addition to the clearing information supplied in the new order message. The default clearing information for the Agency Order of a cQCC Cross type or the First Priority Customer order of cC2C Cross type is set using the SenderSubID (tag 9946 for the Agency Order or the First Priority Customer order in the NoAlloc Repeating Group must equal the SenderSubID or the order will be rejected). Additional alternative clearing details can be specified via the available NoAlloc repeating group tags (See *example below*). In future phase when Contra Order may have > 1 pre-trade allocations, each Contra allocation will use tag 9946 (Firm MPID), versus SenderSubID, as the default clearing information (See *example below*).
- Tag 80 – AllocQty: The sum of AllocQty for each side should be equal to tag 38 – OrderQty, else the order will be rejected.
- **Tag 555 (NoLegs):** The Complex Strategy defined by tag 555 (NoLegs) can have two to thirteen legs. Stock-tied strategies must have exactly one stock leg plus one to twelve option legs. Option legs can only be for standard options.
- **Quantity and Ratios:** Legs must always be entered where the OrderQty is the Greatest Common Factor of the legs quantities.
Example 1: An order to Buy 1 SeriesABC, Sell 2 SeriesXYZ, Qty 100 should not be entered as Buy 100 SeriesABC, Sell 200 SeriesXYZ, Qty 1.
- **cQCC Order:** NMS stock trade information associated with cQCC order (tags: 810, 879, 9811, 9812, 9813) is not validated and will be truncated if it exceeds the specified field limits. cQCC Order will be accepted even if this information is missing, invalid or exceeds the field limits.

Example FIX Message:

Example of New Order Cross Multileg message. Agency order is highlighted in yellow. Contra order is in blue. The grey area represents the option leg(s) of the complex order.

5.5 Order Cancel Request – Single or Multileg (MsgType = F)

Firms can send a cancel request to Sapphire to cancel the remaining quantity of an existing order or mass cancel many orders. The following table summarizes the format for the Order cancel request message.

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = F
11	ClOrdID	Yes	Unique identifier of the cancel request, which is assigned by the institution. Must be 30 characters or less.
9100	RequestType	Cond.	When absent, request is treated as a request for canceling a single order. Required for mass cancels. Valid values: 0 = Single order cancel 31 = Mass cancel of all orders for this MPID on this Session only 34 = Mass cancel of all orders for this MPID on this Session only and Security Symbol (class) 37 = Mass cancel of all orders for this Firm on this Session only Default = "0" when not present.
38	OrderQty	No	<u>Not Required. No Validation if the tag is present.</u>
41	OrigClOrdID	Cond.	<u>RequestType>0: Ignored</u> <u>RequestType=0 or missing: Required.</u> ClOrdID of the targeted Order to cancel. Must be 30 characters or less.

FIX Tag	FIX Name	Req'd	Details
54	Side	Cond.	<p><u>RequestType>0</u>: Ignored <u>RequestType=0 or missing</u>: Required. Side of order. Must match the original order. Valid values: 1 = Buy 2 = Sell. Not required for multileg orders</p>
167	SecurityType	Cond.	<p>Identifies type of instrument. Valid values: OPT (Options) - Cancel only simple option orders MLEG (Multileg) – Cancel only multileg orders ALL – Cancel both simple and multileg orders Default = “ALL” when not present in the Cancel Request. <u>RequestType=31, 37</u>: Ignored <u>RequestType=34</u>: Required. <u>RequestType=0 or missing</u>: Required.</p>
55	Symbol	Cond.	<p><u>RequestType=31, 37</u>: Ignored <u>RequestType=34</u>: Required. The 6 character OCC Security Symbol (class) for an option. <u>RequestType=0 or missing</u>: Not required for multileg orders else required. The 6 character Security Symbol (class) for an option. This value must match the original order.</p>
60	TransactTime	Yes	<p>Time request was initiated/released expressed in UTC (Universal Time Coordinated), also known as GMT. Format: YYYYMMDD–HH:MM:SS.uuu</p>
200	MaturityMonthYear	Cond.	<p><u>RequestType>0</u>: Ignored <u>RequestType=0 or missing</u>: Required. Expiration month and year. Value must match the original order. Format: YYYYMM (For example, 201009 is an expiration of September 2010.) Not required for multileg orders</p>
205	MaturityDay	Cond.	<p><u>RequestType>0</u>: Ignored <u>RequestType=0 or missing</u>: Required. Expiration day of month, used along with MaturityMonthYear (200) to fully specify the maturity date for options. This value must match the original order. Format: DD (single digit allowed) Not required for multileg orders</p>

FIX Tag	FIX Name	Req'd	Details
201	PutOrCall	Cond.	<u>RequestType>0</u> : Ignored <u>RequestType=0 or missing</u> : Required. Specifies whether the option is a put or a call. Must match the original order. Valid values: 0 = Put 1 = Call Not required for multileg orders
202	StrikePrice	Cond.	<u>RequestType>0</u> : Ignored <u>RequestType=0 or missing</u> : Required. Strike price for an option, which must match the original order. Not required for multileg orders
	<i>Standard Trailer</i>	Yes	

Points to note:

- ClOrdID in an Order Cancel Request must identify the cancel request uniquely. As a result, it cannot be the same as the ClOrdID of any order or replace.
- An order may have been partially or fully routed away when Sapphire receives the Cancel Request. Sapphire will immediately cancel contracts on the Sapphire book and send an Execution Report in response. ClOrdID set to the ClOrdID of the cancel, OrigClOrdID set to the ClOrdID of the target order, OrdStatus and ExecType are both set to Pending Cancel(6), and Tag 58 (Text) will contain the number of contracts canceled. Formatted "CxlQty: N" where N is a whole number.
- Upon receipt of a cancel request, if an order is fully resting on the Sapphire book, Sapphire responds with an Execution Report that has ClOrdID set to the ClOrdID of the cancel, OrigClOrdID set to the ClOrdID of the target order, and OrdStatus and ExecType are both set to Canceled(4).
- An order with a cancel pending must not be considered closed until Sapphire sends an Execution message with a status indicating that the order is closed. For example, an Execution with ExecType = Canceled, where ClOrdID refers to the ClOrdID of the cancel, and OrigClOrdID refers to the ClOrdID of the order.
- An order may have only one cancel pending at a time. Sending a second cancel while one is pending will result in the second cancel being rejected. Only after the first cancel is rejected can the firm send another cancel.
- Upon receipt of a mass cancel request, Sapphire will cancel each of the orders as per the request and send Execution report messages for each order that was canceled. If there are any orders that are not canceled due to them being in-flight on a separate FIX line, Firms are responsible to send separate cancels for them. Firms must not treat the request as a guarantee that all orders will be canceled in accordance with their book.
- Canceling a simple or complex order requires setting OrigClOrderID = <ClOrdID of the order> and optionally RequestType (tag 9100) = 0 and SecurityType (tag 167) = <OPT or MULTILEG>. The cancel request will be rejected if the optional RequestType and/or SecurityType are present in the request and do not match the OrigClOrdID.
- Multileg Pending Cancels and Canceled Execution Reports are sent per leg.

5.6 Order Cancel/Replace Request – Single (MsgType = G)

The Sapphire FIX Engine allows customers to replace orders. However, there are some fields such as ClientID and Symbol that cannot be changed on the replacement order. Refer to the table below for a complete list of fields in the Cancel/Replace Request message. Fields not listed below will be ignored.

FIX Tag	FIX Name	Req'd	Can Repl	Details
	<i>Standard Header</i>	Yes		MsgType = G
11	ClOrdID	Yes	Must	Unique ID of replacement order as assigned by the institution. Note that this identifier will be used in the ClOrdID field of the Cancel Reject Message if the replacement request is rejected. Uniqueness must be guaranteed within a single trading day for an MPID regardless of FIX Session. Must be 30 characters or less.
38	OrderQty	Yes	Yes	The total intended order quantity. Valid value: 1 – 999,999. Max length 6.
40	OrdType	Yes	Yes	Order type of the replacement order. This value may be changed. Valid values: 1 = Market 2 = Limit
41	OrigClOrdID	Yes	N/A	ClOrdID of the targeted order when canceling or replacing an order.
44	Price	Cond	Yes	Price for limit orders (OrdType = 2) Format follows standard OCC clearing format where a combined total digits before and after the decimal is 8 or less. 4 digits before the decimal can have 4 after Valid range published via Technical Alert Price should not be specified on market orders
54	Side	Yes	No	Side of order. Must match the original order. Valid values: 1 = Buy 2 = Sell
55	Symbol	Yes	No	The 6 character OCC Security Symbol (class) for an option. Value must match original order.
58	Text	No	Yes	Additional information about the order. This value must be re-specified if it was on the original order and needs to be carried over.

FIX Tag	FIX Name	Req'd	Can Repl	Details
59	TimeInForce	Yes	No	Specifies how long the order remains in effect. TIF may not be replaced Valid values: 0 = DAY
60	TransactTime	Yes	Yes	Time request was initiated/released expressed in UTC (Universal Time Coordinated), also known as GMT. Format: YYYYMMDD-HH:MM:SS.uuu
77	OpenClose	Cond	Yes	Specifies if this order opens a position or closes a position. Required except when CustomerOrFirm set to 4 = Market Maker or 5 = Non-Member Market Maker Valid values: O = Open C = Close.
109	ClientID	Cond	No	For Sapphire member Market Makers orders, MM can send their MPID. Must Match original order. Sapphire Member MM can send their MPID in this tag in lieu of tag 440 (see notes section below)
167	SecurityType	Yes	No	Identifies type of instrument. Valid value = OPT (Options)
200	MaturityMonthYear	Yes	No	Expiration month and year. Value must match the original order. Format: YYYYMM (For example, 201009 is an expiration of September 2010.)
201	PutOrCall	Yes	No	Must match the original order. Valid values: 0 = Put 1 = Call
202	StrikePrice	Yes	No	Strike price for an option, which must match the original order.
203	CoveredOrUncovered	No	Yes	Specifies covered or uncovered options. If tag is absent, the value from target order is retained. Valid values: 0 = Covered 1 = Uncovered

FIX Tag	FIX Name	Req'd	Can Repl	Details
204	CustomerOrFirm	Yes	No	Specifies the order origin type. Valid values: 0 = Priority Customer 1 = Firm 2 = Broker/Dealer 4 = Market Maker 5 = Non-Member Market Maker 8 = Non-Priority Customer
205	MaturityDay	Yes	No	Expiration day of month, used along with MaturityMonthYear (200) to fully specify the maturity date for options. Format: DD (single digit allowed)
439	ClearingFirm	Cond	No	Clearing Member Transfer Agreement. Required if value was on the original order and needs to be carried over. Provides CMTA information. Valid range: 1 – 99999
440	Clearing Account	Cond	No	OCC sub-account (Multi-account). This is a required value for Non-member MM orders. Must Match original order. Sapphire Member MM can send their MPID in this tag in lieu of tag 109 It must be an UPPERCASE alphanumeric value, with a maximum of 5 characters. A value with up to 3 characters is generally used.
	<i>Standard Trailer</i>	Yes		

Points to note:

- Tags that are required and cannot be replaced must match the contents of the original order.
- Tags not listed in the Cancel/replace message above will be ignored.
- Increasing the OrderQty of the original order will result in the order losing its existing time priority in the book.
- OrderQty may not be the actual open quantity of the new order. Sapphire will subtract executed volume of the original (target) order from the OrderQty in the replace request and leave open any remaining contracts in the new order.
- If a cancel/replace is received when an order is routed away (partially or fully), Sapphire will reject the cancel/replace. The original order will still be live.
- Sapphire member Market Maker orders must be identified with their MPID. For flexibility, the MPID can be sent in either tag 440 or 109. When both tags have values, Sapphire will validate them for equivalence and reject otherwise. The MPID on the replace order must match what was given on the original order.

5.7 Order Cancel/Replace – Multileg (MsgType = AC)

The Sapphire FIX Engine allows customers to replace complex orders. Refer to the table below for a complete list of fields in the Cancel/Replace Request message. The “Can Repl” (Can Replace) column is used to determine which fields can be changed.

FIX Tag	FIX Name	Req'd	Can Repl	Details
	<i>Standard Header</i>	Yes		MsgType = AC
11	ClOrdID	Yes	Must	<p>Unique identifier of the order as assigned by the firm for the MPID used to populate the SenderSubID. Must be 30 characters or less.</p> <p>Uniqueness must be guaranteed within a single trading day for an MPID regardless of FIX Session.</p>
38	OrderQty	Yes	Yes	<p>The total intended order quantity.</p> <p>Valid Range: The absolute value of the highest Option Leg Ratio of the strategy multiplied by the OrderQty must be less or equal to 999,999.</p> <p>The absolute value of the Stock Leg Ratio of the strategy, if present, multiplied by the OrderQty must be less or equal to 99,999,999.</p>
40	OrdType	Yes	Yes	<p>Valid values: 1 = Market (market order acceptance is set by the exchange. Please refer to Sapphire circulars for the current setting) 2 = Limit</p>
41	OrigClOrdID	Yes	N/A	ClOrdID of the targeted order when canceling or replacing an order.
44	Price	Cond	Yes	<p>The net price of the spread. This tag is required for Limit orders.</p> <p>To the customer that enters the order:</p> <ul style="list-style-type: none"> • Debit (positive) – Willing to pay • Credit (negative) – Wants cash back • 0 (zero) – Even orders <p>Price should not be specified on market orders. Same format as specified in the Complex order message.</p>

FIX Tag	FIX Name	Req'd	Can Repl	Details
59	TimeInForce	Yes	No	Specifies how long the order remains in effect. TIF may not be replaced Valid values: 0 = DAY
60	TransactTime	Yes	Yes	Time request was initiated/released expressed in UTC (Universal Time Coordinated), also known as GMT. Format: YYYYMMDD-HH:MM:SS.uuu
167	SecurityType	Yes	No	Identifies type of instrument. Valid value = MLEG (Multileg)
58	Text	No	Yes	Additional clearing information for the order that Sapphire will send to OCC. Max 13 characters.
555	NoLegs	Yes	No	Number of Legs of the order Valid values: 2 - 13 (max of 12 Option legs)
→ 600	LegSymbol	Yes	No	For Option Leg: The 6 character OCC Security Symbol (Class) for an option. For Stock Leg: The OCC Options underlying symbol (default) or stock ticker symbol (configurable) <u>Note:</u> This Field is used to delimit the repeating group.
→ 608	LegCFIcode	Yes	No	CFI code for the individual leg Valid values: OC = Option call OP = Option put ES = Equity Shares
→ 611	LegMaturityDate	Cond	No	<i>Option leg only</i> Expiration Date in the YYYYMMDD format.

FIX Tag	FIX Name	Req'd	Can Repl	Details
→ 612	LegStrikePrice	Cond	No	<i>Option leg only</i> Strike price for an option.
→ 623	LegRatioQty	Yes	No	The ratio of this individual leg. Number of option contracts or stock shares for this leg is: LegRatioQty * OrderQty Valid Range: For Option leg: 1-99,999 For Stock leg: 1-9,999,999 The absolute value of the highest Option Leg Ratio of the strategy multiplied by the OrderQty must be less or equal to 999,999. The absolute value of the Stock Leg Ratio of the strategy, if present, multiplied by the OrderQty must be less or equal to 99,999,999.
→ 624	LegSide	Yes	No	The side of this individual leg Valid values are: 1 = Buy 2 = Sell 5 = Sell Short (for stock leg) 6 = Sell Short Exempt (for stock leg)
→ 654	LegRefID	Yes	No	Used to identify a specific leg. Firm assigned ID must not exceed 5 characters. Must be carried over from the original order.

Points to note:

- Tags that are required and cannot be replaced must match the contents of the original order.
- Tags not listed in the Cancel/replace message above will be ignored.
- Increasing the OrderQty of the original order will result in the order losing its existing time priority on the book.
- OrderQty may not be the actual open quantity of the new order. Sapphire will subtract executed volume of the original (target) order from the OrderQty in the replace request and leave open any remaining contracts in the new order.
- Execution Reports marked as Replaced are sent per leg.
- Order Cancel Reject – Single or Multileg (35=9) messages are used to communicate Replace Rejects.

5.8 Don't Know Trade (MsgType = Q)

The Sapphire FIX Engine **does not** accept a DK Trade message. If the firm has any questions or issues with a trade, please contact Trading Operations with the details.

5.9 Order Cancel Reject – Single or Multileg (MsgType = 9)

If any of the validations of a Cancel or a Cancel/replace request fail, Sapphire responds with an Order Cancel reject message. One such example is if it is too late to cancel an order. Firms are always receiving parties for this message.

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = 9
11	ClOrdID	Yes	Unique order ID assigned by institution to the cancel request or to the replacement order.
39	OrdStatus	Yes	Status of order after the Cancel Reject function is applied.
41	OrigClOrdID	Yes	ClOrdID of the order that cannot be canceled or replaced. This value does not apply to the initial order of the day.
58	Text	Yes	Text describing error specified in Appendix C: Error Code table Format: 'Error Code': 'Description' e.g. 46: ClientID Mismatch
102	CxlRejReason	Yes	Code to identify reason for cancel rejection. Valid values: 0 = Too late to cancel 1 = Unknown order 2 = Broker Option (Details provided in Text tag, See Appendix C) 3 = Previous cancel or cancel/replace request is still pending
434	CxlRejResponseTo	Yes	Identifies the type of request in which Cancel Reject is the response. Valid values: 1 = Order Cancel Request 2 = Order Cancel/Replace Request
	<i>Standard Trailer</i>	Yes	

Points to note:

- Note that when a cancel or cancel/replace request is rejected, the target order is still live.

5.10 Execution Report – Single or Multileg (MsgType = 8)

The Sapphire FIX Engine transmits execution reports (MsgType = 8) back to the Firm who sent the order. The execution report message is used to:

- Confirm the receipt of an order
- Confirm changes to an existing order (i.e. accept cancel and replace requests)
- Relay order status information
- Relay fill information on working orders
- Reject orders
- Report post-trade fees calculations associated with a trade.

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = 8
1	Account	No	As specified on the order. Optional field.
6	AvgPx	Yes	Always filled with 0 (zero).
11	ClOrdID	Yes	Unique identifier of the order. This value uses the ID from the original order. Value must be 30 characters or less.
14	CumQty	Yes	Total number of filled option contracts or stock shares.
17	ExecID	Yes	Unique identifier for each Execution Report message. Uniqueness is guaranteed within a single trading day.
18	ExecInst	No	Instructions for order handling on exchange. Will be the same value as entered in the order (if used). Valid values: f = ISO o = Auto Cancel on connection loss (Firm requesting Auto Cancel on Disconnect (ACOD) for this Order). If ACOD is requested either for the session or in the order, this tag will be populated in execution reports for ACOD applicable orders.
20	ExecTransType	Yes	Identifies the trade type. Valid values: 0 = New 3 = Status
31	LastPx	No	Price of the last fill. This field is not required for ExecTransType = 3 (Status). (The number of decimal places might vary and is not limited to 3).
32	LastShares	No	Quantity of bought/sold contracts/shares on the last fill.

FIX Tag	FIX Name	Req'd	Details
			This field is not required for ExecTransType = 3 (Status).
37	OrderID	Yes	OrderID, as assigned by Sapphire, is required to be unique for each chain of orders.
38	OrderQty	No	The number of option contracts or stock shares.
39	OrdStatus	Yes	Identifies the current status of an order. Valid values: 0 = New 1 = Partially Filled 2 = Filled 3 = Done for day 4 = Canceled 5 = Replaced 6 = Pending Cancel 8 = Rejected
40	OrdType	No	Order type that is specified on the order. Valid values: 1 = Market 2 = Limit
41	OrigClOrdID	No	ClOrdID of the canceled or replaced order. This is the target order of the previous request and not the initial order of the day.
44	Price	Cond	Price for limit orders (OrdType = 2) Format follows Price field as described in MsgType D, s, AB, As, G & AC.
54	Side	Yes	Side of order. Valid values: 1 = Buy 2 = Sell 5 = Sell Short (for stock leg) 6 = Sell Short Exempt (for stock leg)
55	Symbol	Yes	For Option Legs: The 6 character OCC Security Symbol (class) for an option. For Equity Legs: The OCC Options underlying symbol (default) or stock ticker symbol (configurable)
58	Text	Cond	Reject Reports (ExecType = 8) contain text describing error specified in Appendix C: Error Code table Format: 'Error Code': 'Description' e.g. 46: ClientID Mismatch

FIX Tag	FIX Name	Req'd	Details
			User requested Cancel and Replace with ExecType equal to "6" contain partial Canceled Quantity Format: CxlQty: 'value' e.g. CxlQty:40 Unsolicited Canceled (ExecType = 4) will contain a freeform human readable reason for the cancel. (See Error Code 0 in Appendix C)
59	TimeInForce	No	Specifies how long the order remains in effect. Valid values: 0 = DAY 3 = IOC (Immediate or Cancel)
60	TransactTime	No	Time of execution/order creation expressed in UTC (Universal Time Coordinated), also known as GMT. Format: YYYYMMDD-HH:MM:SS.uuu
76	ExecBroker	No	Specifies order handling. Valid values: "DNR" = Do not route (Trade at Sapphire or post to Sapphire book. Never route away) Default: If this tag is absent, the order may be eligible for routing as per Sapphire routing rules.
77	OpenClose	Cond	<i>Option leg only</i> Specifies if this order opens a position or closes a position. Required except for Sapphire member or Non-Member Market Maker orders Valid values: O = Open C = Close
103	OrdRejReason	No	The reason the order was rejected. Valid values: 0 = Broker Option (Details listed in Text Field; See Appendix C) 1 = Unknown Symbol 2 = Exchange Closed 3 = Order Exceeds Limit 4 = Too Late to Enter 5 = Unknown Order 6 = Duplicate Order (such as duplicate ClOrdID) 8 = Stale Order 11 = Unsupported Order Characteristic
150	ExecType	Yes	Identifies the type of execution report. Valid values: 0 = New 1 = Partially filled 2 = Filled

FIX Tag	FIX Name	Req'd	Details
			3 = Done for day 4 = Canceled 5 = Replaced 6 = Pending Cancel 8 = Rejected
151	LeavesQty	Yes	Number of open contracts/shares for further execution. If the OrdStatus is Canceled or Rejected (no longer active) then LeavesQty = 0, otherwise LeavesQty = OrderQty – CumQty, or LeavesQty = OrderQty * LegRatio - CumQty.
167	SecurityType	No	The type of security. Valid values: "OPT" or "MLEG"
200	MaturityMonthYear	No	<i>Option leg only</i> Expiration month and year, as specified on the order. Format: YYYYMM (For example, 201009 is an expiration of September 2010.)
201	PutOrCall	No	<i>Option leg only</i> As specified on the order. Valid values: 0 = Put 1 = Call
202	StrikePrice	No	<i>Option leg only</i> Strike price for an option, as specified on the order.
204	CustomerOrFirm	No	<i>Option leg only</i> Specifies the order origin type that is specified on the order. Valid values: 0 = Priority Customer 1 = Firm 2 = Broker/Dealer 4 = Market Maker 5 = Non-Member Market Maker 8 = Non-Priority Customer
205	MaturityDay	No	<i>Option leg only</i> Expiration day of month, used in along with MaturityMonthYear (200) to fully specify the maturity date for options. Format: DD
207	SecurityExchange	Cond	<i>Option leg only</i> Exchange ID (MIC code) of the Exchange on which this execution occurred when it occurs on an exchange other than Sapphire. Example codes from http://www.iso10383.org/ Example Valid Values:

FIX Tag	FIX Name	Req'd	Details
			“AMXO” = NYSE/AMEX Options “BATO” = BATS Options “EDGO” = EDGX Options Market “XBOX” = BOX Options “C2OX” = C2 Options “XCBO” = CBOE Options “XISX” = ISE Options “GMNI” = ISE Gemini Options “MCRY” = ISE Mercury Options “ARCO” = NYSE/ARCA Options “XNDQ” = Nasdaq Options Market “XPHO” = Nasdaq OMXPHLX Options “XBXO” = Nasdaq BX “XMIO” = MIAX Options “EMLD” = MIAX Emerald Options “MXOP” = Members Exchange “MPRL” = MIAX Pearl Options
442	MultiLegReportingType	Cond	Used to indicate what an Execution Report represents for Multileg orders only. Valid Values: 2 = Individual Leg of a Multileg Security 3 = Multileg Security
461	CFICode	Cond	CFI code for the individual leg Valid values: ES = Equity Shares Presently only for Multileg equity leg.
467	IndividualAllocID	No	Unique identifier for a specific NoAllocs repeating group used in a cross order.
528	OrderCapacity	Cond	<i>Stock leg only</i> Firm’s capacity for the stock leg as specified in the order. Valid values: A = Agency P = Principal R = Riskless Principal
548	CrossID	Cond	Identification from a cross order. Only populated from New Order Cross or New Order Cross - Multileg orders.
654	LegRefID	Cond	Identifier from the original order. Only present when tag 442 set to ‘2’
1003	TradeID	Cond	The unique ID that identifies the trade at Sapphire. Only available on Fill (ExecType 1 or 2) messages.
9018	MIAXExecInst	No	Instructions for order handling on exchange. Will be the same value as entered in the order (if used).

FIX Tag	FIX Name	Req'd	Details
			Valid values: P = ABBO Price Protection (APP)
9207	StockExecutionDestination	Cond	<i>Stock leg only</i> Stock trading/reporting venue that will report and clear the stock leg trade Valid Values: 1 = NASDAQ TRF
9463	BillingTradeType	No	Copied from order. Only present if execution report is for a fill or partial fill.
9730	AdditionalBillingParameters	Cond	For Order Executions (ExecType=1 or 2): A field containing additional (not contained elsewhere in Execution report or Order) parameters required for Sapphire billing. See Appendix D: Additional Billing Parameters for details. For other Execution reports (ExecType is not 1 or 2): Tag will not be sent.
9946	FirmMPID	No	Only present if execution report is for a fill or partial fill resulting from a New Order Cross message.
	<i>Standard Trailer</i>	Yes	

Points to note:

- As specified in section “Use of the Execution Reports for Multileg Instruments” in the FIX Specification, a firm can expect two types of fill execution reports:
 - Summary Execution Report for the overall multileg instrument (MultilegReportType of 3). OrdQty, LeavesQty, CumQty, AvgPx are in the context of the strategy. Only used for Complex Order Rejects.
 - Leg Execution Report (MultilegReportType of 2) where the instrument identification and details are promoted to the instrument block. OrderQty, LeavesQty, CumQty, AvgPx are in the context of the individual leg.
- Tag 17 ExecID format: Execution reports representing a simple order will have a format of #####. Execution reports representing a Complex Order leg will have a format of #####-##.
- Order Rejects: If field level validations fails, FOI will send a session reject. Cancel and cancel/replace rejections are sent in the form of cancel reject message. Most other validation failures will result in reject via an Execution report message. If a validation failure does not fit into any of the above mentioned categories, Sapphire sends a Business reject message. When rejecting an order the FIX engine will send back an Execution Report (MsgType = 8) with execution type set to ‘Rejected’ (ExecType = 8).
- Cancel/Replace Responses: The Sapphire FIX Engine sends acknowledgements of cancels and cancel/replaces using Execution Report (MsgType=’8’) message.
- Unsolicited Cancel Reports: Sapphire can send unsolicited cancel reports under circumstances listed in Sapphire rule book. To do this Sapphire would send an Execution Report (MsgType=’8’) with ExecType=’4’ (Canceled). Sapphire will set tag 58 (Text) on the order for the cancel. Also Sapphire would not fill in the OrigClOrdID field.

- Done for the Day messages (NothingDone): For orders that remain open past the end of trading day, Sapphire can send a “done for day” message back to preconfigured firms telling them the status of the order. Open DAY orders expire and are thrown out. Sapphire would send an Execution Message (MsgType=8’) with the ExecType=’3’ (Done for Day). The LeavesQty should reflect the number of contracts that are open on the order.

5.11 Order Status Request – Single or Multileg (MsgType = H)

Firms can send Order Status Request message to check on the status of their orders. In response, Sapphire sends an Execution Report with indicating (ExecTrans Type = 3) that this is the status for the requested order.

The following table contains the fields for the Order Status Request message.

FIX Tag	FIX Name	Req’d	Details
	<i>Standard Header</i>	Yes	MsgType = H
11	ClOrdID	Yes	The ClOrdID of the order being requested. Must be 30 characters or less.
54	Side	Yes	Order side, which must match the original order. Valid values: 1 = Buy 2 = Sell Not required for multileg Orders
55	Symbol	Yes	The 6 character OCC Security Symbol (class) for an option.
167	SecurityType	No	Valid value: OPT or MLEG
	<i>Standard Trailer</i>	Yes	

5.12 User Notification (MsgType = CB)

Firms configured to use Risk Protection Monitoring will receive User Notification communicating the status of Risk checks. Tag 9003 (Event Type) is used to determine the reason for the notification.

The following table contains the fields for the User Notification message.

FIX Tag	FIX Name	Req’d	Details
	<i>Standard Header</i>	Yes	MsgType = CB TargetSubID will not be provided.
926	UserStatus	Yes	6 = other
60	TransactTime	Yes	Time of event creation expressed in UTC (Universal Time Coordinated), also known as GMT. Format: YYYYMMDD-HH:MM:SS.uuu
9000	MPID Group ID	Yes	Firm Assigned Group ID Alphanumeric, Max length 32

FIX Tag	FIX Name	Req'd	Details
9001	Metric ID	Yes	Metric ID for the group Alphanumeric, Max length 32
9011	Routing ID	Yes	Firm assigned Routing ID Alphanumeric, Max length 32
9002	MetricType	Yes	"C" = Rate of Executed Order Contracts "O" = Rate of New/Replace Orders Received '*' (asterisk) = New value masked for backward compatibility. Upgrade to new version to see new values.
9003	Event Type	Yes	"S" = Period Status/Pulse Notification "T" = Safeguard Trigger "R" = Reset Risk Metric "W" = Warning Only "D" = "Metric Deleted" "A" = "Metric Added" "P" = "Metric Paused" "U" = "Metric Un-Paused" '*' (asterisk) = New value masked for backward compatibility. Upgrade to new version to see new values.
9004	MessageID	Yes	Unique ID assigned by Sapphire for this event. Can be used to order solicited messages. Unsolicited message will have a value of zero(0) (numeric)
9005	Configured Counting Time Period	Yes	Configured time period in milliseconds which is used to consider events for this Metric ID (numeric)
9006	Configured Max Quantity	Yes	Configured max threshold of counted items for the Configured Counting Time interval for this Metric ID. Defines rate for the counting time period. (numeric)
9007	Current Quantity	Yes	Current counted quantity at the time of the event for this Metric ID. (numeric)
9008	Max Peak Quantity	Yes	Max peak for Current Quantity during pulse interval
9009	Percentage Level	Yes	Current Percentage for the Counted Quantity in relationship to Configured Max Quantity. Valid values from 0 to 255%. Actual percentages greater than 255 will be reported as the max (255)

FIX Tag	FIX Name	Req'd	Details
9010	Protection Type	Yes	“B” = Block all MPIDs for this MPID Group ID “M” = Block all MPIDs for this MPID Group ID and also mass-cancel all day orders for MPIDs in the group “W” = Warning only ‘*’ (asterisk) = New value masked for backward compatibility. Upgrade to new version to see new values.
	<i>Standard Trailer</i>	Yes	

Points to note:

- Event Types (9003) are treated as solicited (T, R, W, D, A, P, U) or unsolicited (S). See configuration section how to control what types are published on the session.
- Status Notifications are sent periodically on a best effort basis at one minute intervals. Intra-day configurations may delay updates one interval.
- Sapphire will deliver warnings on a best effort basis. If a metric rapidly produces multiple warnings, initial or older warning levels may be dropped. The latest, or most current, warning will be delivered. If a new Event Type is published using an older App Protocol version, it will be mapped to a ‘*’ (asterisk) for backward compatibility purposes. They will be published as unsolicited or solicited based on the new event type.

5.13 Business Reject – Single or Multileg (MsgType = j)

The Business Message Reject <j> message is used to reject an application-level message which fulfills session-level rules and cannot be rejected via any other means. For example, receipt of a valid unsupported business level message type will result in a business reject (j).

Note that if the message fails session level checks (e.g. incorrect body length, required tag missing, etc.), a session level reject (3) will be issued.

FIX Tag	FIX Name	Req'd	Details
	<i>Standard Header</i>	Yes	MsgType = j
45	RefSeqNum	Yes	MsgSeqNum of rejected message
372	RefMsgType	Yes	MsgType of the FIX message being rejected
379	BusinessRejectRefID	Yes	RefID of the message being rejected. This is the ExecID in case an Execution report is being rejected and this is the ClOrdID in case an Order/Cancel message is being rejected. This will be the CrossID in case a New Order Cross or a New Order Cross - Multileg is being rejected.

FIX Tag	FIX Name	Req'd	Details
380	BusinessRejectReason	Yes	Code to identify reason for Business rejection. Valid values: 0 = Other 1 = Unknown ID 2 = Unknown Security 3 = Unsupported Message Type 4 = System not available 5 = Required or conditional tag missing 6 = Matching engine for this symbol is not available
58	Text	Cond	Required if BusinessRejectReason = 0
	<i>Standard Trailer</i>	Yes	

Appendix A: Table of Permitted Origins, Types and Prices Table

Refer to the Sapphire rules for further information.

Appendix B: MIAX Sapphire Options Order Types

Order Type	FIX Tags	Description
Market Order	OrdType (40) = 1 (market). Price (44) must not be specified.	An order to buy or sell that is to be executed at the best price obtainable.
Limit Order	OrdType (40) = 2 (limit). Price (44) must contain a price.	An order to buy or sell at a specified price or better. A marketable limit order is a limit order to buy/sell at or above/below the consolidated best offer/bid for the security.
IOC (Immediate Or Cancel)	OrdType (40) = 1 (market) or 2 (limit) TimeInForce (59) = 3	A limit or market order that is to be executed in whole or in part as soon as such order is received. The portion not so executed is to be treated as cancelled. IOC's only execute on Sapphire and do not route.
ISO Intermarket Sweep Order (available under RegNMS)	ISO IOC order OrdType (40) = 2 ExecInst (18) = f TimeInForce (59) = 3	ISO IOC – Sweep the Sapphire Book to the price, cancel any remaining balance, and ignore all away market quotes. ISO Orders will interact with all resting orders and quotes. ISO Orders are never routed out.

Appendix C: Error Code table

Order and cancel rejects will be identified with the below error code in the Text Tag following format:
'Error Code': 'Description' e.g. 15: Invalid Price

FIX specification states the Text tag is a free format text string. Sapphire will provide as much information as possible but reserves the right to add new errors codes or change meaning as required.

Code	Description	Code	Description	Code	Description
0	Reserved for free form text	34	Invalid CoveredUncovered	65	Missing TimeInForce
1	Unknown Symbol	35	Invalid CustomerOrFirm	66	Missing CustomerOrFirm
2	Exchange Closed	36	Invalid OpenClose	67	Missing TransactTime
		37	Invalid Account	68	SenderSubID Mismatch
4	Too Late To Enter			69	Symbol Mismatch
5	Unknown Order			70	Side Mismatch
6	Duplicate Order	40	Invalid ClientID	71	TransactTime Mismatch
8	Stale Order	41	Invalid MaturityMonthYear	72	MaturityMonthYear Mismatch
11	UnsupportedOrderCharacteristic	42	Invalid Text	73	MaturityDay Mismatch
12	User Requested Cancel	43	Invalid TransactTime	74	PutOrCall Mismatch
13	IOCOOrder	44	Invalid PutOrCall	75	StrikePrice Mismatch
14	Timeout	45	Invalid MaturityDay	76	CustomerOrFirm Mismatch
15	Supervisory	46	Invalid StrikePrice	77	ClearingFirm Mismatch
		47	Missing ClearingAccount	78	ClearingAccount Mismatch
17	System Unavailable	48	Missing ClearingFirm	79	ClientID Mismatch
18	Invalid SenderSubID	49	Missing ClOrdID	80	
19	Invalid OnBehalfOfCompID	50	Missing OrigClOrdID	81	RoutingPolicy Mismatch
20	Invalid OnBehalfOfSubID	51	Missing OrderQty	82	Account Mismatch
21	Invalid ClOrdID	52	Missing Side	83	MaxOpenOrders Exceeded
22	Invalid OrigClOrdID	53	Missing SecurityType	84	MaxOrderSize Exceeded
23	Invalid Side	54	Missing Symbol	85	MaxOpenContracts Exceeded
24	Invalid SecurityType	55	Missing MonthYear	86	Order Routed Away
25	Invalid Option	56	Missing PutOrCall	87	
26	Invalid ExecInst	57	Missing StrikePrice	88	Price On Market Order

27	Invalid ClearingDetails	58	Missing MaturityMonthYear	89	SenderSubID Not An EEM
28	Invalid OrderQty	59	Missing MaturityDay	90	Unknown Option
29	Invalid OrdType			91	Risk Protection
30	Invalid Price	61	Missing ClientID	92	Option Restricted To Closing
31	Invalid TimelnForce	62	Missing OpenClose	93	TooLateToCancel
32	Invalid ExecBroker	63	Missing Account	94	CxI Or Replace Pending
33	Invalid OptionPosition	64	Missing OrdType	95	Auto Canceled on Disconnect

Appendix D: Additional Billing Parameters

Sapphire will provide parameters used by Sapphire for billing in tag 9730 of *execution report* message for all executions (trades). The following table gives the breakup of that field:

Position	Number of Characters	Parameter Name	Description
1	1	OrderOrigin	Origin (CustomerOrFirm) of the firm's side of the order
2	1	ContraOrigin	Origin (CustomerOrFirm) of the opposite side of this trade
3	1	ClassType	Indicates whether the underlying is being billed as maker/taker. 'T' = Taker/Maker '*' (asterisk) = New value masked for backward compatibility. Upgrade to new version to see new values.
4	1	LiquidityIndicator	'M' = Maker 'T' = Taker 'N' = Not Applicable '*' (asterisk) = New value masked for backward compatibility. Upgrade to new version to see new values.
5	1	SbboMPV	'P' = PennyAlways 'N' = Penny/Nickel 'D' = Nickel/Dime ' ' (space) = Not Applicable
6	1	MarketState	'N' = Normal Trading 'O' = Opening ' ' (space) = Not Applicable '*' (asterisk) = New value masked for backward compatibility. Upgrade to new version to see new values.
7	1	FreeTradingCondition	'1' = Regular '2' = ABBOUncrossed ' ' (space) = Not Applicable '*' (asterisk) = New value masked for backward compatibility. Upgrade to new version to see new values.
8	6	RoutedOrderQty	Total Routed Away Quantity. Populated when the trade is executed at away exchange. Format: Fixed length integer prepended with zero I.E. 000012

Position	Number of Characters	Parameter Name	Description
14	1	ContraTimeInForce	0 = DAY 3 = IOC (Immediate or Cancel) ** (asterisk) = New value masked for backward compatibility. Upgrade to new version to see new values.
15	1	FIXLiquidityRole	Possible values: 'R' = Single Order 'Q' = QCC Agency Order 'Z' = QCC Contra Order '@' = Multileg Order 'F' = cQCC Agency Order 'G' = cQCC Contra Order 'H' = C2C Initiator Order 'I' = C2C Contra Order 'J' = cC2C Initiator Order 'K' = cC2C Contra Order ** (asterisk) = downgraded for older version
16	1	ContraLiquidityType	Possible values: 'F' = FIX Order 'B' = Binary Order 'C' = Complex FIX Order 'E' = Complex Binary Order ' ' (space) = N/A (Not Applicable) (eg: Manual Trade) ** (asterisk) = downgraded for older version
17	1	ContraFIXLiquidityRole	Possible values: 'R' = Single Order 'Q' = QCC Agency Order 'Z' = QCC Contra Order '@' = Multileg Order 'F' = cQCC Agency Order 'G' = cQCC Contra Order 'A' = QFO Initiator Order 'C' = cQFO Initiator Order 'H' = C2C Initiator Order 'I' = C2C Contra Order 'J' = cC2C Initiator Order 'K' = cC2C Contra Order ' ' (space) = N/A (Not Applicable) (eg: Contra is a Binary Order) ** (asterisk) = downgraded for older version

Appendix E: Order Protection Settings

The following table provides a mapping of Order Protection Settings to Order types. Firms will coordinate with Trading Operations to establish these order size protection settings.

	Simple Non-Crossing Orders	Simple Crossing Orders	Complex Non-Crossing Orders	Complex Crossing Orders
MaxOrderSize	Y	NA	NA	NA
MaxCrossingOrderSize	NA	Y	NA	NA
MaxOpenOrders	Y	Y	NA	NA
MaxOpenContracts	Y	Y	NA	NA
MaxComplexOrderSize	NA	NA	Y	NA
MaxComplexCrossingOrderSize	NA	NA	NA	Y
MaxComplexOpenOrders	NA	NA	Y	Y
MaxComplexOpenContracts	NA	NA	Y	Y

Appendix F: Contact List

Please visit the [MIA X website](#) for obtaining most up-to-date contact list and other such information.

Appendix F: Revision History

Revision Date	Version	Description
Jul 25 th , 2023	1.0	First release.
Apr 09 th , 2024	1.0a	Removed unused field ExecInst (Tag 18) from New Order Cross (MsgType = s)
Apr 10 th , 2024	2.0	Added field BillingTradeType (Tag 9463) in New Order Cross (MsgType = s), New Order Cross – Multileg (MsgType = As), and Execution Report (MsgType = 8)
Aug 09 th , 2024	1.1	Added Defined Component Price (DCP) support for cQCC in New Order Cross – Multileg (MsgType = As)
Aug 09 th , 2024	2.1	Carried forward changes done in v1.1
Nov 13 th , 2024	2.2	Added Floor related ContraFIXLiquidityRole in Additional Billing Parameters
Jan 08 th , 2025	2.3	Replaced C2C and cC2C related single enum with 2 distinct enums in FIXLiquidityRole and Contra FIXLiquidityRole of AdditionalBillingParameters (Tag 9730), which is used in ExecutionReport (MsgType = 8).
